

## GL 7011 GLOBAL AQUA GLITTER BASE

THE GLOBAL  
TEXTILE CHEMICALS

Glitter base is a special ink used to create a decorative sparkle effect on textiles by mixing polyester glitter into the base ink. It enhances the visual appeal of fabrics by adding a shimmering finish that catches the light beautifully. Global Aqua Glitter Base, Unlike some other glitter inks, it does not crack or peel easily, ensuring long-lasting durability. The base is formulated to provide excellent adhesion to fabrics, preventing the glitter from flaking off after multiple washes.

Glitter base is a neutral acrylic and pu base belonging to The Global's aqua series. It has been specially made to work as a base for glitter flakes or metallic particles to produce a gloss of higher radiance and a greater wash resistance.

Glitter base is suitable for use on cotton and some cotton/polyester blends, making it versatile for different textile applications. However, it is important to test the ink on the fabric before large-scale production to ensure compatibility and adhesion. Certain synthetic fibers may not bond well with the ink, affecting durability.

The application process involves printing the glitter base onto the fabric using a screen printing technique. After printing, the fabric is typically cured using heat to set the ink and ensure maximum wash resistance. Proper curing is essential to maintain the flexibility and longevity of the print. Overall, glitter base is a valuable addition to textile printing, offering endless creative possibilities. Whether used for fashion, branding, or decorative purposes, it provides a high-impact finish that enhances the aesthetic appeal of any fabric.

#### IDEAL FABRIC

100 % cotton or polyester blends

#### CURING

160°C for 3 minutes

#### STORAGE

In cool dry and properly closed  
(18°C to 32°C)

#### MESH

It is dependent on flake size

#### ADDITIVES

Not Recommended

#### APPLICATION

Mix with flakes prior to use ,add  
upto 20 % to 30 % of flakes to base

#### CLEAN UP

Wash off screen using water and  
mild detergent

#### SQUEEGEE & STENCIL

It depends on flakes size,  
65-75 durometer sharp edge
