

GLOBAL AQ ECO 2400

Global AQ ECO 2400 is a high-quality acrylic emulsion designed for textile printing applications. It forms a soft yet durable film, making it an excellent choice for fabrics requiring flexibility and longevity. This emulsion is engineered to offer superior performance in both machine and screen printing, ensuring smooth operation without any build-up on equipment. One of its standout features is its exceptional thermal and mechanical stability, allowing it to withstand high processing temperatures and mechanical stress without degradation.

This means the printed textile retains its original softness and drape, making it suitable for fashion, home textiles, and other high-end applications. Additionally, this acrylic emulsion offers good adhesion to fabrics, ensuring that printed designs remain vibrant and long-lasting even after multiple washes. The emulsion provides a smooth, even print surface, reducing issues like uneven texture or patchiness in the final output. Global AQ ECO 2400 is also known for its resistance to cracking and peeling, even on flexible and stretchable fabrics. This ensures the durability of the printed design, making it suitable for applications that require high wash fastness and wear resistance.

This makes it a safer choice for both manufacturers and consumers concerned about sustainability. Its compatibility with various pigments and additives allows for customized color formulations, enabling printers to achieve a wide range of shades and effects. This makes it ideal for designers looking to create unique and high-quality textile prints. Its reliable performance and high stability make it a preferred choice in the textile printing industry.
