

GLOBAL AQ RHM

THE GLOBAL
TEXTILE CHEMICALS

Global AQ RHM is a highly concentrated synthetic thickener designed for pigment printing applications. It provides excellent viscosity control, ensuring smooth and consistent ink flow during the printing process. This thickener is specially formulated to maintain stability and performance without being affected by electrolytes. It ensures uniform color distribution, preventing inconsistencies in the final print. Suitable for both cotton and synthetic textiles, Global AQ RHM enhances the quality of pigment printing across various fabric types. It improves ink adhesion while preserving the softness and flexibility of the material.

Its advanced formulation allows for precise control over print sharpness and detail. It prevents bleeding or spreading, ensuring crisp and well-defined patterns on the fabric. Global AQ RHM is easy to mix and use, making it an efficient choice for professional textile printers. It integrates seamlessly with water-based pigment inks without altering their properties. By optimizing ink viscosity, it reduces printing defects and enhances production efficiency.

This results in higher-quality prints with better wash and rub fastness. The thickener remains stable under different printing conditions, providing reliability in large-scale and high-speed printing operations. It maintains consistency even in prolonged use. Its versatility makes it ideal for various pigment printing techniques, including rotary, flat-screen, and digital printing methods. It performs well under different curing and drying processes. Overall, this synthetic thickener is a valuable addition to any pigment printing process. It ensures superior print quality, enhanced durability, and excellent performance across a wide range of textile applications.
