

## GLOBAL PE STANDARD COLOURS

**THE GLOBAL**  
TEXTILE CHEMICALS

GLOBAL PIGMENT DISPERSION STANDARD COLOURS is a water-based textile screen printing ink from the GLOBAL PE SERIES, formulated with a PVC and Phthalate free plasticizer. It contains essential components like pigments, fillers, thixotropic agents, stabilizers, and both water-based and mineral oils to enhance performance. The ink forms a flexible film that does not harden the fabric, ensuring a soft, user-friendly print with easy water clean-up. It delivers excellent print clarity, making it ideal for achieving precise artwork. These inks are ready to print straight from the container and should not be altered, though a small amount of reducer may be added if needed. Apply one layer and cure at 160°C for 3 minutes to ensure strong adhesion and durability. The ink is suitable for a wide range of fabric types and printing conditions. For best results, store between 65°F and 95°F (18°C – 35°C) in a dry, cool environment. Containers must be tightly sealed to prevent drying and contamination. Shelf life is one year from the manufacturing date under proper storage conditions.
